Which strength, and fitted to which observations?
Calibration: each record wants a different strength
(a)
annual best
both
photos best
RMS error in the gap, 1996-2009 (m)
annual CoastSat
photo dates
Strength (share of the drift held back)
Test: the weaker strengths predict best
(b)
no groin, 2010-2016
no groin, 2017-2025
2010-2016
2017-2025
Annual RMS error in the gap, test period (m)
0.12 (weaker)
0.16 (annual)
0.2 (both)
0.25 (photos)
Strength (calibrated on)
