Which strength, and fitted to which observations?
Calibration: each record wants a different strength
(a)
annual best
both
photos best
RMS error in the gap, 1996-2009 (m)
annual CoastSat
photo dates
Strength (share of the drift held back)
Test: the annual-fitted strength predicts best
(b)
no groin, 2009-2016
no groin, 2017-2024
2009-2016
2017-2024
Annual RMS error in the gap, test period (m)
0.12 (annual)
0.18 (both)
0.25 (photos)
Strength (calibrated on)
