The fixed-shift groin on straight coasts
(a)
reads nothing
−M
+M
downdrift
updrift
drift (not read)
Coast turned against the drift (-20°)
(b)
drift
Shoreline (m), + seaward
coast at -20°
year 50: total sand +539 m
Cells from the groin (500 m); updrift →
Coast turned with the drift (+10°)
(c)
Shoreline (m), + seaward
coast at +10°
year 50: total sand -1,481 m
Cells from the groin (500 m); updrift →
Each side of the groin at year 50
(d)
Year 50 (m), + seaward
Coast orientation (°)
Is sand conserved? (0 = yes)
(e)
Sand gained or lost
by year 50 (m of shoreline)
Coast orientation (°)
year 1
year 5
year 10
year 25
